NUMED
CARDIAC DIAGNOSTICS

envisage is a visual information system, which incorporates patient call.

Using the latest LCD screen technology, your practice can improve patient health awareness, broadcast practice messages and call patients to their appointments.

Envisage messages offer a clear, concise and targeted presentation of health and practice information to patients – while they wait for their appointment. Using Envisage, practices can:

- Promote healthy living – for example, encourage regular exercise
- Keep patients informed – from monthly DNAs to general health information
- Communicate with patients – i.e. flu jabs are available
- Call patients to their appointment – visually and audibly.

Seamlessly integrated with EMIS, Envisage is available for use with both LV and PCS systems.

Receptionist and clinician modules

The receptionist module enables the practice to view an on-screen presentation of the patients due, arrived, in consultation and any missed appointments. The clinician module allows patients to be called and re-called by the GP.

Media pack with regular updates

Every Envisage system is equipped with a selection of topical health messages. Examples include smoking warnings and 5 A DAY promotions. The Envisage media pack automatically updates, collecting national health content every two months.

Practices can combine the standard media messages with their own messages, which are easily created using HTML, images or Microsoft PowerPoint slides.

Extra features of Envisage

- Targeted messaging
- Time scheduler
- Individual screen schedule
- Flexible display variables and tickertape options
- Adaptable colour schemes
- Presentation functionality - ideal for staff meetings and group training sessions
