

Low cost project engineering resources from Egton can ensure your organisation meets the demands of your IT projects.

Egton can now provide skilled ICT engineers to help implement and deliver your IT projects on a day-by-day basis or longer term secondment – you choose what suits your organisation best.

Additional resources can be essential to the successful implementation of a large-scale IT project - yet can prove costly when only needed for a short or temporary period of time.

Egton can provide trained engineers on a temporary basis, at a low cost to suit the demands of your IT projects.

*Trained
engineers on
a daily,
monthly or
long term
basis – as
required*

Benefits to your organisation

Egton project engineers bring expertise, additional resources at an economical cost:

- All Egton engineers are trained to the highest level and are **experienced with a wide range of IT systems**
- All engineers are equipped with a boot **stock of tools and equipment** that may be needed to facilitate repairs, upgrades and installations
- Engineers employed by Egton **eliminate the burden of human resource issues**, such as a lengthy recruitment process, poor staff performance, poor attendance, extended absence due to sickness
- Engineer work schedules are **tasked directly by your organisation**
- A **full time project manager will be assigned** – this will be a permanent senior member of Egton staff who will work closely with your organisation, as required
- Egton is **ISO 9001:2000** accredited, and engineers work in association with **ISO 27001** and adhere to IT Security best practices
- All Egton engineers have the **full support of our experienced technical call centre**, with more than 200 trained consultants.

In October 2005, Egton provided North Somerset PCT with two engineers to install 220 PCs across 24 practices for Choose and Book.

Head of IM&T, Jason Wallace says: "We were so impressed with the standards employed and the service received that we opted to extend the contract of one engineer for a further 3 months. The extra resource has meant we've been able to accomplish more anti-virus upgrades, more PC upgrades as well as taking care of proactive maintenance issues, such as providing daily on-site support and printer installs."
